

SPARETECH is like Amazon – but for industrial spare-part-management.

With our platform, we are going to revolutionize how master data and spare part sourcing is done in the future. Besides, we contribute a valuable puzzle piece to the Industry 4.0-vision of a digital twin.

To cope with this challenge, we are using cutting-edge languages, technologies and tools from the field of semantical data management, big data and automated data processing.

**To sum it up:
SPARETECH is a data driven spare part management startup.**

We are looking for a

SOFTWARE ENGINEER IN A DATA-DRIVEN INDUSTRY 4.0-STARTUP

YOU ARE EAGER TO...

- Build a game-changing software in an industrial setting (Industry 4.0, Digital Twin)
- Challenge yourself in the field of big data and semantic web
- Work on a green field and see something big growing
- Establish efficient development-processes by automation
- Be pragmatic and part of an energetic team

YOU CAN COMPLETE OUR TEAM WITH YOUR...

- Skills in software development (Kotlin, Java, JavaScript)
- Experience in data modelling and proceeding techniques
- Interest in semantic web (e.g. RDF, graph databases)
- An agile way of working and striving for clean code

HOW WE CAN MAKE YOUR DECISION EASIER...

- Competitive compensation package with equity share
- Start-up environment with open mindset and space to realize your ideas
- Taking care of your personal development (hard- as well as soft-skills)
- Already fully-working and proven prototype with projects at well-known customers
- A lot of amazed faces at traditional industries caused by our software innovation
